---

This template use five menu PHP files

1. **mega.class.php** - Default
2. **dropline.class.php**
3. **split.class.php**
4. **moo.class.php**
5. **css.class.php**

If you have to use one of these menus:

1. Go to *Extensions - Template Manager - scorpil*
2. Choose some menu types or Enter in Menu textarea: **Menu Item ID=someMenu** (For example: 86=mega) without "class.php"!
3. Click Save

The screenshot shows a web-based configuration interface titled "Menu System". It contains several input fields and a large text area. The "Menu Module" dropdown is set to "mainmenu". The "Menu Type" dropdown is set to "Moo Menu". The "Start Level" is set to "0" and the "End Level" is set to "-1". Below these fields is a large text area labeled "Customize menu for page" which is currently empty.
