This template use seven layout PHP files

1. **default.php** - Default layout (content + left column + right column)
2. **left+right+content.php** - (left column + right column + content)
3. **left+content+right.php** - (left column + content + right column)
4. **content+right.php** - (content + right column)
5. **left+content.php** - (left column + content)
6. **handheld.php**
7. **iphone.php**

If you have to use one of these layout:

1. Go to *Extensions - Template Manager - scorpii*
2. Choose some layout or Enter in Layout textarea: **Menu Item ID=someLayout** (For example: 86=content+right) without ".php"!

3. Click Save

The screenshot shows a web interface titled "Layout". It has a sidebar on the left with "Layout Desc" and "Page layouts overwrite". The main area has a "Default Layout" dropdown set to "content+right" and a large text area containing a list of layout IDs and names: 1=default, 12=left+right+content, 13=default, 17=content+right, 78=left+content, 86=default. At the bottom, there are dropdowns for "Iphone" (set to "iphone") and "Other Handheld devices" (set to "handheld").
